

TYPE 14 SHUTTLE

(With thanks to Bravo Fleet)

Flight Crew: 1-2

Max. Passengers: 12

Length: 14.64 Meters

Width: 4.5 Meters

Height: 3.26 Meters

Cruise Speed: Warp 6

Armaments:

4 type VII Phaser Arrays

2 micro photon torpedo launchers

Type-14 shuttles are the largest and most advanced personnel shuttles in service as of 2400. They are configurable with options ranging from simple passenger space, VIP stateroom, cargo space, or scientific equipment. They are just as capable as small runabouts for most missions, and are even used for long-distance journeys thanks to their high top speed. They retain from the Type-11 shuttle a single aft hatch, along with top and bottom hatches with docking clamps, as well as the same phaser armament. In addition, they have micro torpedo launchers fore and aft, allowing them to defend their VIP passengers. Kepler has ten Type 14 shuttles assigned to her.
